

Pro-Kleen Anti-Viral and Anti-Bacterial Fogger

Product information

Specifications

Brand: Pro-Kleen

Capacity: 0.5 L

A Quick and Easy Way to Sanitise a Room

Thoroughly sanitising a room has never been more important, but it's a very time-consuming process. Disinfecting every nook and cranny in a room is difficult, and it's easy to miss little spots as you go - especially in hard-to-reach areas around furniture, behind cupboards and shelves, and so on. This simple aerosol spray uses a unique formula that works with the airflow to spread into every inch of your room, breaking down any viruses and bacteria that it comes into contact with.

Powerful Anti-Bacterial, Anti-Viral Formula

The unique 70% alcohol formula of our anti-bacterial, anti-viral sanitising formula breaks down harmful microbes on contact. It's tested to meet EN 13697 and EN 14476 requirements, meaning it's tested to be effective against enveloped viruses and 99.9% of harmful bacteria strains such as staph, E.coli, and more.

Unique High-Discharge Formula

Once you spray the aerosol, the surface sanitising particles bind themselves to other particles in the air. This means the sanitising formula uses the room's natural airflow to circulate around, permeating those hard-to-reach areas and thoroughly disinfecting them.

Amazing Coverage

Each 500ml can will sanitise an area of up to 300m³. This amazing coverage means it's perfect for any room - small or large.

Cleans and Deodorises

By breaking down the microbes that cause foul odours to occur, this anti-bacterial fogger eliminates stale, musty smells at the source. This will instantly make any room feel brighter and cleaner - and it makes sure rooms stay that way for longer. The spray itself has a potent clean smell which dissipates after a short while, allowing you to tell which areas have been treated.

Suitable for Any Indoor Environment

The amazing coverage and powerful anti-viral, anti-bacterial formula means our fogger is ideal for any indoor area. It can be used to sanitise washrooms, meeting rooms, reception areas, hallways, offices, changing rooms, and even domestic areas like living rooms and car interiors.

How to Use

- Shake well before use.
- Spray several short bursts of the aerosol into each corner of the room.
- Leave to work for 5-15 minutes.
- After this time, you can safely reoccupy the room.
